

south australia fellowship

9-11 november 2021
mclaren vale

Join the Farmers for Climate Action South Australian Fellowship and learn more about how you can drive effective change on-farm and beyond the farm gate.

The fellowship is a unique opportunity for you to learn from experts in climate science and climate-smart agriculture, helping you to farm in a changing climate. You will also hear from experts in community change and politics, who will equip you with the tools you need to become a leader and drive change in the climate and agriculture spaces to benefit your industry and Australian agriculture.

You'll join a supportive network of South Australian farmers, and will receive extensive training in key skills, such as political engagement, community campaigning, media and advocacy. You will also receive mentoring by a national leader and the opportunity to connect with other participants during a three day in-person workshop. During the workshop you will also hear from other farmers that are putting climate smart agriculture into action and visit a farm that is leading the way in SA. We will also provide you with extensive online resources you can use to develop your knowledge further.

Cost: The three-day conference is free, and accomodation / transport will be heavily subsidised with a bursary.

Guest Speakers include: (with more announced soon!)

Dr Peter Hayman
Principle Scientist Climate Applications at South Australian Research and Development Institute

Professor Sarah Wheeler
Water Economist

Nic Kentish
Resource Consulting Services Australia

Ellen Litchfield
SA Coordinator
Farmers for Climate Action
