## HYPER YIELDING CROPS

### 2021 Results and Awards South Australia

**What did HYC teach us in 2021 and who were the 2021 HYC Award winners for the region?**

- **HYC Awards – regional winners to be announced at the meeting.**
- Climate statistics and yield potential for the region - what did this mean for your crop?
- Feed vs milling wheat - the interaction between genotype, environment and management (GEM) – how did these interactions affect the phenology, biomass, final grain yields and profit?
- Disease - which management strategies performed best in canola and cereal crop canopies and why?
- How hard do we need to push the productivity of our crops with artificial N given the high price of urea?
- How were HYC entry crops benchmarked against each other in the 2021 Awards programme?
- What did we learn from our award winning paddocks – which agronomic benchmarks made these crops higher yielding?

**Project lead Nick Poole will be joined by colleagues Dr Kenton Porker, Max Bloomfield, Aaron Vague, Daniel Bosveld (FAR Australia), Jen Lillecrapp (Mackillop Farm Management Group) and Jon Midwood (Techcrop).**

**When?**

Monday 1<sup>st</sup> August 2022  
6.30pm – 9.00pm

**Where?**

The Gallery  
14 Ridge Terrace  
Millicent  
SA 5280
